

- ACTIVESTONE® is an innovation and a Patent of **PizzaGroup®**.
- ACTIVESTONE® is a new, extremely high thermal efficiency, electrical heating system, for refractory stones employed in ovens
- ACTIVESTONE® is suitable for any oven employing refractory stones
- ACTIVESTONE® reduces refractory stone heating time by about 50% with respect to conventional systems used by other competitors
- ACTIVESTONE® reduces energy consumptions up to 25% with respect to conventional electric systems used by other competitors
- ACTIVESTONE® reduces cooking and backing times up to 25%
- ACTIVESTONE® incorporates a temperature sensor in the middle of the refractory stone to allow the quickest temperature regulation and stability
- ACTIVESTONE® protects the heating elements by incorporating them into the stone itself , thus increases their life-span, by maintaining their temperature stable and controlled
- ACTIVESTONE® gives a temperature plateau extremely uniform all over the surface of the refractory stone, thus it guarantees perfect heating
- ACTIVESTONE® allows to reach refractory temperatures equal to the temperature limit of that of the electrical heater elements, without heat losses
- ACTIVESTONE® employs materials to RoHS standards
- ACTIVESTONE® can be safely used for temperatures up to 550° Celsius.
